

Packaging system

Maison Nunu resells. The pieces are made by other people, so the packaging is the only part of the object that is genuinely the brand's. It is doing more work here than it would for a maker.

THE RULE THAT GOVERNS EVERYTHING BELOW

Ink obeys contrast.
Foil does not.

Printed flat, the rule is burgundy on light grounds and gold on dark ones. Gold on beige is 2.10:1; burgundy is 1.59:1 on midnight and 1.35:1 on graphite. Each looks acceptable on the screen it was chosen on and disappears on paper.

Foil is not pigment and is not governed by those numbers. It is a mirror with a raised embossed edge, so it throws a specular highlight and reads as a bright line wherever light catches it. That is why the guide's own shopping bag carries the full burgundy lockup on a dark ground and works. It is the reason every dark piece in this system is specified as foil, and why none of them may be printed in flat ink.

PRIMARY

Burgundy
#7A2036
RGB 122, 32, 54
Ink and foil. Light grounds only.

Gold
#C89A6A
RGB 200, 154, 106
Foil. Dark grounds only.

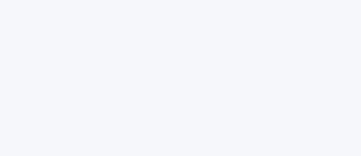

SECONDARY

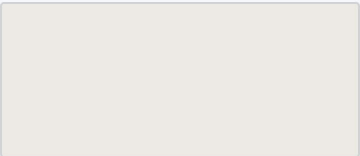

Graphite
#2E2E2E
RGB 46, 46, 46
Type. Second dark ground.

Midnight
#1A222D
RGB 26, 34, 45
Bag, box, pouch.

Icy white
#F5F7FA
RGB 245, 247, 250
Documents and screens.

Soft beige
#EDE9E4
RGB 237, 233, 228
Cards, tissue, inserts.

ONE LOCKUP, TWO PROCESSES

The supplied lockup is used everywhere, unaltered. No recoloured variant, no knockout, no single-colour version. What changes between a light piece and a dark one is the process, not the artwork.

On beige flat ink, one or two hits. Burgundy sits at 8.32:1 and needs nothing special.

On midnight hot foil, two dies in register: burgundy for the heart and wordmark, gold for the facet lines and the strapline. Blind emboss under the foil if the printer offers it, which is what gives the edge its catch.

Always supply the `.ai` or `.eps` master, never the PNG, and never the supplied SVGs, which are base64 raster in an SVG wrapper and carry no vector benefit. A foil die is cut from vector.

WHAT EACH CUSTOMER GETS

Three tiers, cut against the real catalog. Two thirds of the 75 pieces, so tier 2 is the one that gets used.
